DETAILED ACTION

Applicant's election of the Group I claims, to the extent that they read on mammals, in Paper No. 6 is acknowledged. However, upon further consideration, the claims of Group I as they read on mammals will be further restricted. See below.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 and 12, drawn to a method of producing transgenic mammals, wherein the method comprises pronuclear injection, classified in classes 800 and 800, subclasses 21 and 25.
- II. Claims 1, 9, and 11, drawn to a method of producing transgenic mammals, wherein the method comprises homologous recombination in ES cells, classified in classes 800 and 800, subclasses 21 and 25.
- III. Claims 1 and 10-11, drawn to a method of producing transgenic mammals, wherein the method comprises nuclear transfer, classified in class 800, subclass 24.

Inventions I-III are distinct each from the other. Inventions are distinct if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are distinct methods of creating transgenic mammals that are not capable of use together. Moreover, the methods of Groups I-III have different modes of operation. For example, the method of Group I is

Art Unit: 1632

practiced by pronuclear injection of a transgene into an oocyte, the method of Group II is practiced by introducing a transgene by homologous recombination into the genome of an embryonic stem cell and then transferring the embryonic stem cell into a blastocyst, and the method of Group III is practiced by transferring a nucleus from a donor cell into an oocyte. As such the methods of Groups I-III appear to require materially different reagents, different method steps and technical considerations each from the other. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and separate search requirement, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
